

FOR IMMEDIATE RELEASE

Announcing ChatWP - A Revolutionary AI Answer Bot for WordPress

A new AI-powered answer bot has been launched to help WordPress users and developers with direct answers to their WordPress questions. Based on the same underlying technology powering the viral rise of “ChatGPT”, ChatWP has been trained on all the official WordPress documentation from wordpress.org and is capable of answering questions about how to use, develop for, and participate in the WordPress community. It can even write code examples for users to see practical examples of how to implement the solution in code. With its cutting-edge AI technology, ChatWP delivers quick answers to help users get the most out of their WordPress experience.

"It's a great tool for learning anything about WordPress," says Aaron Edwards, creator of ChatWP. "With its advanced training on all the official WordPress documentation, users can be confident that they are receiving the most accurate and up-to-date information available."

One of its unique features is its ability to provide links to the sources it used to answer a user's question. This means that users can easily verify the accuracy of the answers they receive and dive deeper into the information if they need to. With the added ability to provide source links, users can have even more confidence in the answers they receive.

ChatWP is completely free and can be used without any registration by visiting <https://wpdocs.chat>. Users can simply type in their questions and receive instant answers. The easy-to-use interface makes it simple for anyone to get the answers they need to tackle their WordPress questions. While the tool is being provided free for the WordPress community, "I've unfortunately had to implement strict rate limits to keep API costs from getting out of control," said Aaron. "If you do hit the rate limit, we provide a way to make requests using your own OpenAI API key instead."

With the successful launch of ChatWP, Aaron is now looking to turn this underlying technology into a service that makes it simple to create similar chatbots trained on your own code and documentation. Through his service, Aaron is hoping to empower businesses to take advantage

of new AI technology and create bots that can help their customers and employees with questions related to their products and services. With ChatWP as a model, Aaron is confident that businesses of all sizes can benefit from the power of AI.

You may know Aaron Edwards as the founder of Imajinn (an AI image generator for WordPress), Infinite Uploads (cloud storage plugin), and Web3 WP. He also serves as the Chief Technology Officer at WPMU DEV. “I love the challenge of building innovative tools for WordPress using new technologies like AI and Web3,” said Aaron. Whether it's through his companies or his role at WPMU DEV, Aaron seems to always be pushing the boundaries of what's possible with WordPress.
